

Cataplex F (Perles) Contain Vitamin F (Essential Fatty Acids From Flaxseed) And Bovine Liver Fat Extract

Flaxseed oil is the primary health-giving constituent of the flax plant, *L. usitatissimum*, which has been cultivated since at least 5,000 B.C. Its health-giving properties were known to the Greeks, and Hippocrates recommended it for inflammation of the mucous membranes. In recent times, people have turned to plant sources for omega-3 oils, as ocean pollution has affected fish as a source.

*Introduced in 1938
Bottle Size: 60 Perles*

How Cataplex F (Perles) Keeps You Healthy

Maintains cellular health

The oil contains alpha linolenic acid and is converted by the body into omega-3 oils, which are necessary for proper functioning of cell membranes and maintenance of hair, nails, eye receptor cells, nerves, and brain tissue.*

Maintains a healthy flow of blood through the circulatory system

The alpha linolenic acid in flaxseed oil maintains the free flow of blood through the circulatory system in several ways. First, it affects a specific clotting system factor called plasma factor VII. Second, it affects the actual clumping together of the body's clotting cells, called platelets.*

Supports immune system functions

Essential fatty acids are important for proper functioning of the immune system, and some studies indicate that flaxseed oil helps maintain normal immune system function.*

What Makes Standard Process Cataplex F Perles Unique

Flaxseed oil plus glandulars

- Vegetable source of omega-3 essential fatty acid that has not been exposed to ocean pollution

Cold-processed in low temperatures

- Low temperature extraction maintains the nutritional quality of fresh flaxseed oil

Does not contain iodine

- For the iodine-sensitive person

Packaged in perles, not sold in bulk

- Protects against oxidation and retains the integrity of the fragile, fresh oil

Organic Farming

Organic farming methods – low-till cultivation, natural fertilizers, and compost in a healthy, balanced eco-system

- Ensures plants are nutritionally complete and free of synthetic pesticides

Unique Processing

Expert microbiologists and chemists in on-site labs constantly conduct bacteriological and analytical tests of raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses conducted validate product content and specifications

- Assures high quality and delivery

Proprietary blend: Flaxseed oil, bovine liver fat extract, flaxseed oil extract, and bovine orchic extract.

Other ingredients: Gelatin, glycerine, beeswax, water, pyridoxine hydrochloride, and carob.

Sold to health care professionals.

Suggested use: One perle per meal, or as directed.
